DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claim 1-6 are rejected under 35 U.S.C. 101 as being non-statutory.

Regarding claim 1, claim recites "claim recites in lines 4-5 dividing the compression encoding table into plurality of blocks each of which has the repeating or increasing data values and then in lines 6-7, claim recite "calculating the repeating or increasing data value by using a logic circuit". This process consist solely of mathematical operations without practical application in the technological arts or simply manipulates abstract ideas without practical application in the technological arts. There is no tangible or concrete output of this process. Furthermore recording of compression encoding table is non-statutory because it is just the record. Claims 2-6 are dependent on claim 1 therefore they are also rejected.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2624

4. Claim 1-6 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, claim recites in lines 4-5 dividing the compression encoding table into plurality of blocks each of which has the repeating or increasing data values and then in lines 6-7, claim recite "calculating the repeating or increasing data value by using a logic circuit". Above limitation are indefinite because it is not clear how the compression encoding table is divided into plurality of blocks each of which has the repeating or increasing data before the repeating or increasing data values is calculated by logic circuit. Claims 1-6 are dependent on rejected claim 1 therefore they are also rejected.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

6. Claims 1-2 are rejected under 35 U.S.C. 102 (b) being anticipated by Kobayashi (US 6,351,570).

Regarding claim 1, Kobayashi discloses dividing the compression encoding table into plurality of blocks each of which has the repeating or increasing data values (Kobayashi in Fig. 21-22, 33, 35, shows dividing the compression encoding table into plurality of blocks in which repeating (binary repeating) data values) and

Art Unit: 2624

calculating the repeating or increasing data value by using a logic circuit (Kobayashi in Fig. 23 and 31 shows logic circuit for calculating repeating binary values).

Allowable Subject Matter

6. Claims 7-14 are allowable over prior art of record.

Claims 3-6 are objected as being dependent on rejected base claim but would be allowable if rewritten in independent form including limitations of the base claim and any intervening claims and provided that claims 1-2 overcome rejection under 35 USC 112 second paragraph.
